Ms. Crumlish:

Enclosed is the Total Coliform Rule (TCR) Report for the February 2016 monitoring period for Joint Base Anacostia-Bolling (JBAB) Anacostia side. Included with the results are the certificates of analysis and the Chain of Custody Forms.

JBAB-Anacostia side continued to monitor at Building 47 during the second routine sample event in February. The sample was collected in the second floor woman's locker room at the far left sink. This location replaced Building 391 permanently as the one of the four approved routine sampling location. Building 391 will become an approved alternative sampling location.

Please mail all correspondence to:

*Record Yes when (1) Chlorine < 0.10 mg/L and HPC is either not measured or HPC >500 cfu/mL or (2) Chlorine is not measured and HPC >500 cfu/mL.

** Equal to the number of Yes in column titled "Chlorine & HPC*" divided by the sum of the Number of Routine and Repeat Samples Taken and the number of instances when HPC is monitored but residual chlorine is not monitored.

Disinfectant Residual Reporting

Systems must report the following (40 CFR 141.134(c)):

(i) The number of samples taken during each month of the last quarter.
(ii) The monthly arithmetic average of all samples taken in each month for the last 12 months.
(iii) The arithmetic average of the monthly averages for the last 12 months.
(iv) Whether, based on Sec. 141.133(c)(1), the MRDL was violated.

Step 1:

a. Enter data from the current month of monitoring, including begin and end dates for sample collection.

b. The disinfectant residual data entered is that monitored at the same time and place as coliform samples are collected. The number of samples collected should equal the number of coliform samples collected during the month (including repeat coliform samples).
c. If you did not monitor for free chlorine during the month, leave those cells blank.

Monthly sample collection **begin** date:	2/2/2016
Monthly sample collection **end** date:	2/16/2016

Parameter	# of Samples	Monthly Average	Min	Max
Free Cl2				
Total CL2 - Chloramine disinfection	4	2.87	1.19	3.60
Total CL2 - Chlorine disinfection				

Step 2:

a. Drop the oldest month of data and add the most recent month.
b. Enter the current month's data (average, minimum, maximum) into the RAA calculation, below.

c. If you did not monitor for free chlorine during the month, leave those cells blank.

d. This spreadsheet will automatically calculate the running annual average based on the monthly averages.
e. At the end of the quarter (March, June, September, December), the running annual average of monthly averages (RAA) is used to determine compliance with the MRDL.

f. The RAA averages at the end of the quarter are necessary for CWSs to prepare CCRs.
